

PhD program Cutting Edge Microscopy (CEM)

Tutoring “Mikroskopische Methoden mit Praktikum”

CEM PhD students have the opportunity to serve as tutors in the microscopy course "Mikroskopische Methoden mit Praktikum" offered by Dr. Sebastian Knüsel. To participate, CEM PhD students must complete this form and submit it to Sebastian Knüsel (sebastian.knuesel@unibe.ch) and the CEM program administration (cem.mic@unibe.ch) **by September 15**. You have full flexibility in what you show the students, provided it incorporates a microscope that you primarily operate. Please include brief context on your current research and explain why this specific microscopy technique is used.

Based on your expertise in microscopy, you may receive an offer to participate as a tutor. After the teaching activity, you must submit a short report to the CEM program administration. The estimated time commitment is 2–6 hours for preparation, 2–4 hours for the practical teaching session, and 4 hours for writing the report. Successful completion of this activity is worth 0.5 ECTS.
